PSI IS REIMAGINING HEALTHCARE

Sayana® Press

This pre-packaged, one-time use injectable contraceptive puts women and girls at the center of our work, bringing care closer to them.

We’re conducting programs that help build the evidence to influence policy, unlock new market opportunities, and build private and public health center capacity.

**Mozambique** Administering Sayana® Press at home

With support from a Maverick Collective partner, PSI-Mozambique is training private-sector community health workers and nurses to administer Sayana® Press to women who choose it as their contraceptive method after balanced counselling. Community workers can provide injections to women where they want it - even at work or home.

**DRC, Niger & Zambia** Expanding access at the community level

In partnership with USAID and Tulane University, PSI conducted a pilot program to show that PSI-paid and -trained nursing and medical students can safely and effectively administer Sayana® Press. We also advocated with the government to allow community-level health workers administer the contraception, making Sayana® Press easier to access by bringing it right to the women who want it.

In Niger, PSI offers Sayana® Press through mobile service delivery, moving services closer to clients in hard-to-reach areas with support from USAID.

As part of the USAID-funded Sexual and Reproductive Health for All Initiative (SARA) in Zambia, PSI network member SFH conducted a pilot showing that trained public sector community health workers can safely and effectively administer Sayana® Press. In partnership with the Ministry of Health, USAID and implementing partners through the National Family Planning Technical Working Group, plans are underway for national scale-up.

**Myanmar** Micro-enterprise and private sector distribution

The Ministry of Health is working closely with PSI to roll out its pilot program training public health workers to administer Sayana® Press. PSI is also exploring the feasibility of adding Sayana® Press to the basket of products distributed through the community health entrepreneur network we’ve created in the country, called Win Win. The micro-entrepreneurs from remote villages and low-income peri-urban areas in five sites across Myanmar currently offer products including oral contraceptive pills, clean water solutions, ORS and Zinc to treat diarrhea.

**Senegal & Haiti** Unlocking the potential of pharmacies

In Senegal, PSI network member ADEMAS has overbranded Sayana® Press as Securil Press with funding from USAID. ADEMAS makes Securil Press available through pharmacies, supporting access to injections by providers and laying the groundwork for self-injection.

PSI’s network member in Haiti, OHMaSS, is planning to distribute Sayana® Press in 2018 at pharmacies and clinics through its commercial partner DISPROPHAR with Dutch funding.

**Angola** Training providers

PSI-Angola, in cooperation with the Ministry of Health and with funds from USAID and UNFPA, trained public sector providers to administer Sayana® Press.

**Benin** Communications & provider training

As part of the introduction of Sayana® Press in Benin with funding from USAID, PSI network member ABMS developed training and communications tools used by all the country’s health providers and community health workers.

**Madagascar & Vietnam** Ensuring supply

Working with partners and USAID funding, PSI-Madagascar ensures a steady supply of essential drugs and contraceptives, including Sayana® Press, to community health workers.

In Vietnam through MSD for Mothers, PSI is partnering with Pfizer to help urban youth and rural women in select provinces access Sayana® Press and other contraceptive methods through clinics and pharmacies. PSI-Vietnam will also train providers and use social marketing to enable women to make informed decisions about contraception.
